DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Bob Gnuse on 05 December 2005.

The application has been amended as follows:

- On lines 13-14 of claim 1, the phrase "a connecting member mounted between said pusher of said latch and said limiting portion of said cutting member" has been replaced with --a connecting member mounted between said pusher and said latch--.

The following new claims have been added:

- 18. The tool device of claim 1, wherein said connecting member is formed with a knob.
- 19. The tool device of claim 1, wherein said limiting portion is formed near a pivot of said cutting member.
- 20. The tool device of claim 19, wherein said limiting portion is round and having two limiting sections of flat cutoffs on opposite sides, said latch comprises a slope corresponding to said limiting section so that when said latch is in a locking position, said limiting section flatly contacts said slope.

Allowable Subject Matter

2. Claims 1 and 17-20 are allowed.
3. The following is an examiner's statement of reasons for allowance: Claims 1 and 17-20 are allowable because of the apparatus with a main body, a cutting member with a cutting edge and limiting portion, a locking mechanism composed of a latch with a pusher and a plurality of number wheels and the latch is limited by the number wheels in a locking position and to be moved to a release position to allow the cutting member to move and actuate the latch moving from the locking position to a release position as set forth in the claims. None of the prior art cited discloses an apparatus that incorporates the use of a main body, a cutting member with a cutting edge and limiting portion, a locking mechanism composed of a latch with a pusher and a plurality of number wheels and the latch is limited by the number wheels in a locking position and to be moved to a release position to allow the cutting member to move and actuate the latch moving from the locking position to a release position to only allow a user with the combination code to use the knife. Therefore, in view of what has been stated above, the claims are allowable over the art of record.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
